MESSAGE

I am happy to know that the Electricity Departments of UTs of Daman & Diu and Dadra & Nagar Haveli are observing Energy Conservation Day on 14th December, 2013.

Securing energy for man's future requirement is crucial to our sustainability. Increasing the supply of energy is detrimental to our environment unless it is from non-renewable resources. Hence, we also need to focus on conserving as much energy as we can.

On the occasion of Energy Conservation Day, I request the people of Daman & Diu and Dadra & Nagar Haveli to make efficient use of energy at their homes and work place and make energy conservation a part of their normal life.

MESSAGE.

Our rapid and sustainable development rests a great deal on the prudent use of energy and curbing its wastage. Energy conservation has to be made a way of life. The efficient use of energy and its conservation must be integral to our quest for energy security.

Sustainable development mandates the use of available natural resources in a more efficient way. Conservation and saving of energy help us not only to accelerate our economic and social development but also protect natural resources and environment as well as conserve foreign exchange reserves. Energy conservation facilitates replacement of non-renewable energy with renewable sources of energy.

I would like to take this opportunity to appeal to all to re-dedicate ourselves to the idea of energy conservation and to take action on a continuous basis in variety of day-to-day things to conserve energy and in the process, benefit ourselves.

MESSAGE

I am extremely happy to participate in the celebration of "Energy Conservation Day 2013". In Dadra & Nagar Haveli, the Industrial sector is the biggest consumer of energy in the form of electricity and thermal energy resources. With the on set of the global recession, in the economy, the industrial sector has to be take steps continuously to cut down costs mainly through better technology and improved efficiency of resources employed. The energy constitutes an important resource and its costs are always rising due to increase in prices of oil, gas, coal and so on. Thus the need for energy efficiency improvement, energy conservation, and systematic energy management becomes apparent. It is widely recognized that the opportunities of energy consumption in industry are diverse and substantial.

Therefore the entrepreneurs should realize the actual benefits of energy use and use of the energy audit as a tool to increase the profits and productivity. I suggest that each industry must make energy audit mandatory for itself. The energy audit will tell where the potential for improvement lies and therefore where the efforts of the management should be concentrated upon.

Besides the up-coming industry should adopt the Green Factory rating system which is a voluntary and consensus based programme. The rating system would facilitate green factory buildings.

On this occasion, I sincerely advise industries to take advantage of availability of cheap energy by Dadra & Nagar Haveli Administration by adopting means of energy conservation so as to make more profits, reduce carbon emission and to do national service.

(G.S.Meena)
